Profile Protectiv Mask

Presentation :

Protectiv™ Profile barrier mask, supplied with 100 days of filtration.

Made in 3D printing and designed in Rilsan PA11, this filtering respiratory mask is designer, ultra light, comfortable, thermorformable and eco-responsible. It conforms to the shapes of your face in order to guarantee optimal filtration (95% at 1µm and 95% at 3µm, category 1) of the projections. It is suitable for both professional and personal use.

Kit composition:

This 100 day filtration kit is supplied with a Protectiv™ Profile barrier mask, a flat elastic with buttonhole and 1 filter cartridge. The kit includes 100 days of filter media as well as an in-house mask thermoforming and use manual.

Advantages and field of use:

- Ultra-light, thin and very resistant thanks to its composition in 1mm thick PA11
- Sustainable and eco-responsible material
- Comfortable to wear and thermoformable to your body type
- Adjustable to your head size thanks to the flat elastic band adjustable on 2 discreet side buttons
- Easy maintenance
- Mask and filter cartridges can be washed in the dishwasher (60 ° c minimum) after each daily use
- Filters washable 10 times in a washing machine net (60 ° C minimum) after 4 hours of use
- Quick flat drying (approx. 10 minutes in the open air)
- Customization possible on request with logo and characters

Watertightness and high performance guaranteed for category 1 use, when the mask is worn with the filters provided. Suitable for non-sanitary use (UNS1), both professional and personal.
